

Switching to Your Own Claude Team Account

Moving off the shared login → your own seat. Reconnecting everything.

~10 minutes · Mac & Windows · Do this once

We're moving everyone off the shared Claude login onto **your own Team seat**. The good news: your entire PFM setup **stays exactly as it is** — skills, automations, all of it. This is just a **login swap** plus a quick **reconnect** of a few connectors. You do **not** reinstall anything.

✓ STAYS (DON'T TOUCH)

- All your PFM skills
- CLAUDE.md + your memory
- Settings & commands
- Higgsfield CLI login
- Lucid Link mount

🔄 CHANGES

- The email you sign into Claude Desktop with
- A few in-app connectors need a quick reconnect (they're tied to the account)

BEFORE YOU START

0

Grab your Team invite

Check your **@powerfoxmedia.com** inbox for an invite from **Claude** to the Power Fox Media workspace, and **accept it**. No invite yet? Ping Sam — don't start until you have it.

You'll also need Claude Desktop installed and Lucid Link mounted (you already have both).

THE SWITCH

1

Sign out of the shared account

Open **Claude Desktop**. Click your profile/name (bottom-left corner) → **Log out**. You're leaving the shared `powerfoxlogin@gmail.com` account.

2

Sign back in with your own email

Click **Sign in** → use **your own @powerfoxmedia.com email** (the one you just accepted the invite with). When it loads, you should see **Power Fox Media** as your workspace.

3

Confirm your setup carried over

Open the **Code** tab → **New session** → open any Lucid project folder → type:

`What skills do I have available?`

You should see the full PFM skill list (hvg-flow, hig-flow, audio-qc...). ✓ If they're there, nothing was **lost** — your setup lives on your computer, not the account.

4

Reconnect your connectors

Go to **Settings** → **Connectors** and reconnect any that show as disconnected:

- ☐ **Notion** → Connect → sign into the PFM Notion workspace. (Needed for task briefs + delivery comments.)
- ☐ **Higgsfield** → Connect with **your own email**. Then check in a Code session: `higgsfield account status` → should read **Power Fox Media (~1M+ credits)**. If it looks off, re-run `claude-pfm-account-switch.sh`.
- ☐ **Canva** (only if you make BN lower thirds) → in a Code session, ask `connect Canva` → sign in with the **shared PFM Canva** creds.
- ☐ **ElevenLabs** (only if you do voice swap) → reconnect per its setup in the hub Resources.

Then **restart Claude Desktop** — ⌘Q and reopen on Mac; close from the system tray and reopen on Windows.

5

Smoke test → you're done

Code tab → New session inside a Lucid project:

- `What skills do I have available?` → returns the list ✓
- `higgsfield account status` → Power Fox Media ✓
- Ask Claude to fetch a Notion request → confirms Notion ✓

Same setup. Your own seat. **That's it.**

⚠ IF SKILLS DON'T SHOW UP IN STEP 3

It's almost never the account — you're just in the wrong folder. Claude only loads PFM skills inside Lucid (`/Volumes/ads/PFM MEDIA MASTER FOLDER/...` on Mac, `L:\...` on Windows). Open a session

INSIDE A PROJECT FOLDER THERE

and try again. Still stuck? Ping Sam.

WHY NO REINSTALL?

Your skills, CLAUDE.md, and memory live in `~/ .claude` on your computer — they're tied to the machine, not your login. Swapping which email you sign in with doesn't touch a single one of them. Only the OAuth connectors (Notion/Higgsfield/Canva) live with the account, which is why those get a quick reconnect.

Questions → **#claude-pfm** or ping **Sam**.
